

FitCheck turns your closet into a personal AI stylist.

A mobile-first fashion assistant that understands what you own, learns what you like, and shows you what to wear or buy with Agnes AI text and image models.

PROBLEM STATEMENT

Style decisions are fragmented.

People own clothes they forget about, shop without context, and struggle to imagine how outfits will look on their own body before wearing or buying.

SOLUTION

One loop: closet, swipe, shop.

FitCheck creates a digital wardrobe, generates outfit cards, learns from swipe-rights, and builds a personalized shopping feed from each user's style profile.

UNIQUE SELLING POINT

AI that styles you, not a mannequin.

Agnes AI combines clothing metadata, taste signals, budget, occasions, and optional body photos to produce personal outfit and try-on previews.

DEMO MAGIC

Tinder-style fashion discovery.

Swiping makes feedback effortless. Every like becomes a stronger signal, so recommendations feel more personal the longer the user plays.

Closet items become AI-readable style data

Old Money Weekend

Cream knit top, tailored charcoal trousers, loafers, and a warm gold accent. Match score: 94%.

SHOP

WARDROBE

Swipe feedback trains the next outfit queue

AWARD WINNING POTENTIAL

High demo impact with real user value.

FitCheck is visual, interactive, and instantly understandable: upload clothes, answer a style quiz, swipe through AI outfits, then try on and shop looks that match your taste. It shows Agnes AI in a full product loop, not just as a chatbot.
